SHAFT LINER

Product Description

American Gypsum Shaft Liner Board is designed for use in elevators, stairwells, and area separation walls. When used in a rated assembly, these panels can provide a cost effective, 2 hour fire resistant wall system. Shaft Liner Board has a moisture resistant treated paper facing.

Product Data

Typical Sizes:	1" thickness, 2' width, 10'-12' length, Type X
Edges:	Square
Weight:	Approx. 4.2 lbs./sq.ft.
Compliance:	ASTM C-442 Flame Spread 20, Smoke Developed 0

Advantages

- Liner panels can be installed from the exterior of the shaft and require no scaffolding.
- Shaft wall systems create economical fire rated assemblies.
- For use in commercial construction.
- UL listed (see UL Fire Resistance Directory for specific approved assemblies).

Limitations

- Panel installation and finishing to comply with GA 600, 15th edition.
- Panels are non-load bearing.
- Not recommended for use where excessive moisture occurs.
- Must be protected from direct exposure to weather.
- Maximum spacing of framing members is 24" o.c.
